

SocialPulse: The Complete Instruction Manual

This is the consolidated version of the SocialPulse documentation suite.

01. Introduction & Overview

Welcome to **SocialPulse**, the premier all-in-one, AI-powered social media management SaaS platform designed for modern agencies, entrepreneurs, and marketing teams.

Mission

Our mission is to democratize high-conversion social media marketing by putting the power of advanced AI (Gemini) and enterprise-grade scheduling tools into the hands of every creator. SocialPulse isn't just a scheduling tool; it's a **Revenue Engine** that helps you transform engagement into growth.

Platform Pillars

```

    D --> D1[Performance Tracking]
    D --> D2[Client Approval Portals]
```

Why SocialPulse?

In a world where social algorithms change daily, SocialPulse provides the stability and intelligence needed to stay ahead. Whether you're managing a single personal brand or a portfolio of 50 clients, our platform scales with you, providing the same premium experience at every level.

02. Getting Started

Setting up your SocialPulse account is the first step toward social media mastery. This guide covers registration, profile configuration, and your initial platform orientation.

1. Creating Your Account

- Navigate to SocialPulse:** Visit our main application portal.
- Registration Options:**
 - Direct Email:** Sign up with your professional email and a secure password.
 - Google OAuth:** Fast-track your registration by connecting your Google account.

3. **Plan Assignment:** Upon registration, you are automatically assigned to our **Free Tier**. This allows you to explore the platform immediately with a complimentary balance of AI credits.

2. Completing Your Profile

Your profile settings ensure that SocialPulse works for your specific needs.

- **Full Name & Avatar:** Personalize your account to make team collaboration easier.
- **Password Management:** Change your password at any time via the security tab.
- **Notification Preferences:** Configure how and when you receive alerts for:
 - Successful/Failed publishing.
 - Team invitations.
 - Weekly analytics digests.

3. The Dashboard Layout

When you first log in, you'll be greeted by your central dashboard:

- **Top Navbar:** Contains your Workspace Switcher, Notification Bell, and Quick-Action "Create Post" button.
- **Left Sidebar:** Your primary navigation for Content Studio, Assets, Monitoring, and Account Management.
- **Main Feed:** A real-time view of your AI Credit balance, high-level metrics, and upcoming scheduled content.

4. Understanding AI Credits

Most AI-powered actions (writing, reviewing, image generation) consume **AI Credits**.

- **Monthly Refresh:** Your credits refresh at the start of your billing cycle.
 - **Usage Bar:** Monitor your consumption in the sidebar to ensure you never run out during a big campaign launch.
-

03. Workspace Setup & Branding

SocialPulse is built on a powerful multi-tenant architecture. **Workspaces** allow you to isolate data for different brands, departments, or clients while using a single login.

1. What is a Workspace?

A workspace is a completely isolated environment containing its own:

- Social Media Accounts
- Media Library
- Hashtag Sets
- Campaigns & Content
- RSS Feeds & E-commerce Stores
- Analytics Data

2. Creating & Managing Workspaces

- **Creating:** Click the Workspace Selector in the top navbar and select "Manage Workspaces" to add a new brand.
- **Switching:** Use the dropdown to jump between brands instantly. The entire UI will refresh to show data only for that specific brand.

3. High-Fidelity Branding Settings

Every workspace can be uniquely branded to reflect the corporate identity of the client or brand you are managing.

- **Brand Identity:** Upload a logo and set a display name.
- **UI Customization:** Set a "Brand Color" to personalize the interface.
- **AI Guidelines:** This is critical. Provide the AI with specific instructions for this brand (e.g., "Always use emojis," "Tone: Professional but witty," "Never mention competitors"). The Gemini AI will follow these rules for every post it drafts in this workspace.
- **Default CTA Link:** Set a mandatory link (like a store URL). The AI Reviewer will automatically suggest including this link in your posts.

4. Team Collaboration

- **Inviting Members:** Send email invitations to colleagues or clients.
 - **Role-Based Access Control (RBAC):**
 - **Owner:** Full access including billing.
 - **Admin:** Can manage settings, members, and all content.
 - **Member:** Can create and schedule content.
 - **Viewer:** Read-only access to analytics and scheduled posts (perfect for client review).
-

04. Social Accounts Integration

Connecting your platforms is the core of the SocialPulse experience. Our high-fidelity interface makes managing multiple platforms feel native and professional.

1. Supported Platforms

SocialPulse currently supports:

- **X (Twitter):** Full posting and engagement tracking.
- **Instagram:** Business and Creator accounts (via Facebook).
- **Facebook:** Pages and Groups management.
- **LinkedIn:** Personal profiles and Company pages.
- **Canva:** Direct integration for design workflows.

2. Connection Process

1. **Navigate to Settings:** Go to the "Connected Accounts" tab within your workspace.
2. **Authorize:** Click "Connect" on your chosen platform. You will be taken to the platform's official authorization page.
3. **Permissions:** Grant all requested permissions. These are essential for SocialPulse to publish content and fetch analytics on your behalf.
4. **Return to Pulse:** Once authorized, you will be redirected back to a branded confirmation page in SocialPulse.

3. High-Fidelity UI

When accounts are connected, you will notice the SocialPulse interface adopts the **official brand colors and gradients** of those platforms.

- **Selection State:** Active platforms in the Scheduler glow with their native brand colors (e.g., the signature Instagram gradient or Facebook Blue).
- **Iconography:** Official platform icons are used throughout the app for instant recognition.

4. Reconnecting & Security

- **Token Expiry:** For security, some platforms require reconnection every 60-90 days. You will receive an alert if an account needs attention.
 - **Disconnecting:** You can revoke access at any time via the settings menu.
-

05. The Scheduler

The **Scheduler** is your production floor. It combines high-fidelity design with powerful automation to make publishing effortless.

1. Crafting Your Post

1. **Target Platforms:** Toggle the platform buttons at the top. Notice the branded gradients that appear when a platform is selected.
2. **Content Editor:** Write your caption. The system includes real-time character counting tailored to each platform's limits (e.g., 280 for X).
3. **Media Attachment:**
 - **Upload:** Drop files directly.
 - **Library:** Pick existing assets from your cloud-synced Media Library.
 - **Canva:** Launch the Canva editor directly from the post composer.

2. Scheduling Logic

- **Publish Now:** Pushes your content to all selected platforms immediately.
- **Timed Scheduling:** Choose a specific date and time.
- **Bulk Scheduling:** Upload a CSV template containing weeks of content. SocialPulse will parse the file and populate your queue automatically.

3. High-Fidelity Preview

Before you schedule, use the "Preview" toggle to see exactly how your post will look natively on:

- Mobile feeds (Instagram/Facebook)
- Desktop timelines (X/LinkedIn)

4. Client Approval Portals

For agency owners, the "Share for Approval" feature is a game-changer.

```
graph LR
  A[Agency Drafts Post] --> B[Generate Secure Link]
  B --> C[Client Views Portal]
  C --> D{Decision}
  D -- Approve --> E[Auto-Schedules]
```

```
D -- Feedback --> F[Agency Notified]
F --> A
```

1. Click the **Share** icon on any scheduled post.
 2. Send the generated link to your client.
 3. **The Portal:** Your client sees a beautiful, branded page where they can approve or request changes. **No login is required for the client.**
-

06. Unified Inbox

The **Unified Inbox** eliminates the need to switch between dozens of browser tabs. It centralizes all your social interactions into one high-performance stream.

1. Multi-Platform Aggregation

The Inbox pulls data from all connected accounts, including:

- **Mentions:** When someone tags your brand.
- **Comments:** Replies to your posts on Instagram, Facebook, and LinkedIn.
- **Direct Messages (DMs):** Private conversations across platforms.

2. Workspace Isolation

This is a core SocialPulse feature. When you switch workspaces, the Inbox **instantly filters** to show only messages related to that brand. You will never accidentally reply to a "Brand A" customer using "Brand B's" voice.

3. Workflow & Triage

- **Status Tracking:** Mark messages as "Read," "Pending," or "Archived."
- **Search & Filters:** Quickly find specific conversations or filter by platform (e.g., "Show only Instagram DMs").
- **Team Assignment:** (Pro Feature) Assign a conversation to a specific team member for follow-up.

4. Quick Replies

Use the "AI Assistant" inside the inbox to draft polite, helpful, or conversion-focused responses based on the context of the customer's message.

07. Social Listening & Automation

SocialPulse doesn't just help you talk; it helps you listen. **Social Listening** allows you to monitor the global conversation for trends, mentions, and competitive intelligence.

1. Setting Up Rules

1. **Keywords:** Define the words or phrases you want to monitor (e.g., your brand name, "social media SaaS," or a competitor's name).
2. **Platforms:** Select where to listen (X, Web, News).
3. **Exclusions:** Use negative keywords to filter out noise (e.g., track "Apple" but exclude "fruit").

2. Trend-to-Post Automation

This is the ultimate growth hack.

```
sequenceDiagram
    participant Web as Social Web
    participant Pulse as SocialPulse Listening
    participant AI as Gemini AI
    participant Studio as Content Studio

    Web->>Pulse: Mentions Keyword
    Pulse->>Pulse: Detects High Engagement
    Pulse->>AI: Analyze Context
    AI->>Studio: Draft Optimized Post
    Studio->>Studio: User Reviews & Schedules
```

- **Identify:** When a high-engagement post matches your rule, it appears in your Listening feed.
- **Draft with AI:** Click the "Draft with AI" button on any result.
- **The Magic:** SocialPulse automatically pulls the context of that trend into the Content Studio and drafts a conversion-optimized post reacting to it. This allows you to jump on trending topics in seconds.

3. Automation Rules

For power users, you can create "If-This-Then-That" workflows:

- **Trigger:** "When keyword X is mentioned with positive sentiment..."
- **Action:** "...Auto-reply with a thank you message" or "...Tag the Sales team in Slack."

4. Competitive Intelligence

Set up rules to track your competitors. Understand what their customers are complaining about or praising, and use that data to refine your own marketing strategy.

08. Analytics & Insights

Data is useless without insight. The **Analytics** dashboard provides a stable, high-performance view of your social media growth.

1. High-Level Metrics

- **Total Audience:** Combined follower count across all connected platforms.
- **Engagement Rate:** A percentage reflecting how many people interacted with your content relative to your reach.
- **Reach & Impressions:** How many unique eyes saw your content versus how many total times it was displayed.

2. Platform Breakdowns

Click on any platform (e.g., X or Instagram) to see deep-dive metrics specific to that network:

- **Best Time to Post:** Historical data showing when your specific audience is most active.

- **Top Performing Content:** A gallery of your most successful posts sorted by engagement.

3. Comparative Reporting

- **Date Ranges:** Compare your performance over the last 7, 14, 30, or 90 days.
- **Growth Trends:** Visualize your follower and engagement growth over time with interactive charts.

4. Resilient Reporting

SocialPulse uses "Safety-Net" logic to ensure your dashboard never crashes.

- **Empty State Support:** Even if a new workspace has zero posts, the dashboard will load gracefully with zeros instead of error messages.
- **Background Sync:** Data is refreshed every 4-6 hours to ensure your reports are always current without slowing down the UI.

09. AI Tools (Gemini Integration)

At the heart of SocialPulse is our **Gemini AI Engine**. We don't just use AI to "write text"; we use it to build frameworks that sell.

1. AI Content Reviewer (The Revenue Engine)

This is the most powerful tool in the Content Studio. It uses the **Pain-Solution-CTA** framework to score your drafts.

Example Review Logic

```
{
  "framework": "Pain-Solution-CTA",
  "score": 85,
  "analysis": {
    "hook": "Strong - targets the 'time-poor agency owner' pain point.",
    "proof": "Missing - add a client testimonial or data point.",
    "cta": "Direct - leads to the booking page."
  }
}
```

- **Framework Analysis:** It checks if your post has a compelling hook (Pain), a clear offer (Promise), social proof, and a strong call to action (CTA).
- **One-Click Remix:** If your draft is weak, the AI provides a "Remix." Click "Apply" to instantly upgrade your post to a high-conversion version.

2. AI Writer & Strategist

- **Generation:** Give the AI a topic (e.g., "Why social media is important for dentists") and select your tone (Professional, Witty, Aggressive).
- **Magic 7-Day Plan:** Located in the Campaigns tab, this feature generates a full week of strategic content tailored to your campaign goals in one click.

3. AI Image Generation (Imagen 4.0)

- **Prompt Example:**

"A high-tech workspace with purple neon lighting, cinematic style, 8k resolution, photorealistic"

- **Integration:** The generated image is saved directly to your Media Library and can be attached to any post immediately.

4. Smart Guidelines

The AI is only as good as its instructions. Use the **Workspace Branding** settings to provide "Global Guidelines."

- **Example:** "Never use the word 'hustle'," "Always end with a question," "Use British English spelling."
 - **Result:** The AI will apply these rules to every post it drafts, ensuring a consistent brand voice.
-

10. Media Library & Editor

Your assets are your most valuable resources. The **Media Library** provides enterprise-grade storage and editing directly in your browser.

1. Cloud-Synced Storage

- **Automatic Upload:** Drag and drop your images and videos. They are securely stored in the cloud (AWS S3) and synced across your entire team.
- **Workspace Isolation:** Media uploaded to "Workspace A" is invisible to "Workspace B," ensuring client confidentiality.

2. Organization & Search

- **Folders:** Create a nested folder structure to keep your campaigns organized.
- **Tagging:** Add tags (e.g., "UGC," "Product Shot," "Promo") to find assets in seconds.
- **Bulk Actions:** Select multiple files to move or delete them at once.

3. Built-in Canvas Editor

No need for external tools. Click "Edit" on any image to open our professional editor:

- **Cropping:** Aspect ratios tailored for X, Instagram, and LinkedIn.
- **Filters & Adjustments:** Enhance brightness, contrast, and saturation.
- **Text & Shapes:** Add overlays or watermarks to your brand assets.
- **Save as New:** Keep your original image and save the edited version as a separate file.

4. Usage Limits

Your storage limit (e.g., 100MB, 5GB, Unlimited) depends on your active billing plan. Monitor your usage in the "Assets" tab to avoid upload failures.

11. RSS Feeds & Content Ingestion

Never run out of content ideas by connecting your favorite blogs, news sites, and industry portals directly to SocialPulse via **RSS Feeds**.

1. Connecting a Feed

1. **Find the URL:** Locate the RSS feed URL for your favorite site (e.g., `techcrunch.com/feed`).
2. **Add to Workspace:** In the RSS tab, click "Add Feed."
3. **Category:** Assign it a category (e.g., "News," "Inspiration") to keep your feed organized.

2. Feed-to-Post Workflow

- **Browse:** See the latest headlines from your connected sites in real-time.
- **Auto-Draft:** Click "Draft" on any article. SocialPulse will pull the article's title, image, and link into the Content Studio.
- **AI Enrichment:** Use the AI Reviewer to transform the news article into a high-engagement social media commentary.

3. Automation (Autopost)

(Enterprise Feature) Set up specific feeds to automatically draft or publish posts to your social accounts whenever a new article is detected.

4. Troubleshooting Feeds

- **Broken Links:** If a feed stops updating, verify the URL is still valid in your browser.
 - **Refresh Frequency:** Feeds are polled every 60 minutes for new content.
-

12. Troubleshooting & Support

Encountering an issue? Most problems in SocialPulse can be resolved with a few simple steps.

1. Common "Failed to Load" Errors

If you see "Failed to load..." on a specific page:

- **Check Your Workspace:** Ensure you have an active workspace selected in the top dropdown.
- **Hard Refresh:** Press `Ctrl+F5` (Windows) or `Cmd+Shift+R` (Mac) to clear your browser cache.
- **Server Connection:** Check if your internet connection is stable. If the error persists across all pages, our API might be undergoing maintenance.

2. Social Account Disconnections

- **Platform Expiry:** X, LinkedIn, and Facebook frequently "expire" sessions for security. If your posts are failing, go to **Settings > Connected Accounts** and click "Reconnect."
- **Permissions:** Ensure you haven't revoked permissions for the SocialPulse app within your native social media settings.

3. Post Publishing Failures

- **Media Limits:** Check if your image or video exceeds platform limits (e.g., X has a 5MB image limit).
- **Caption Length:** Ensure your caption hasn't exceeded the platform's character count.
- **API Limits:** Platforms like X have daily posting limits. If you've posted 100+ times today, you may be temporarily rate-limited.

4. Getting More Help

- **Knowledge Base:** Check the `CLAUDE.md` file for technical details.
 - **Team Admin:** Contact your Workspace owner to check if your role has the necessary permissions.
 - **Support Ticket:** Reach out to our support team with a screenshot of the error and your Workspace ID.
-
